

SOLUTION BRIEF

Introducing SpectrumDB 360 Dashboard

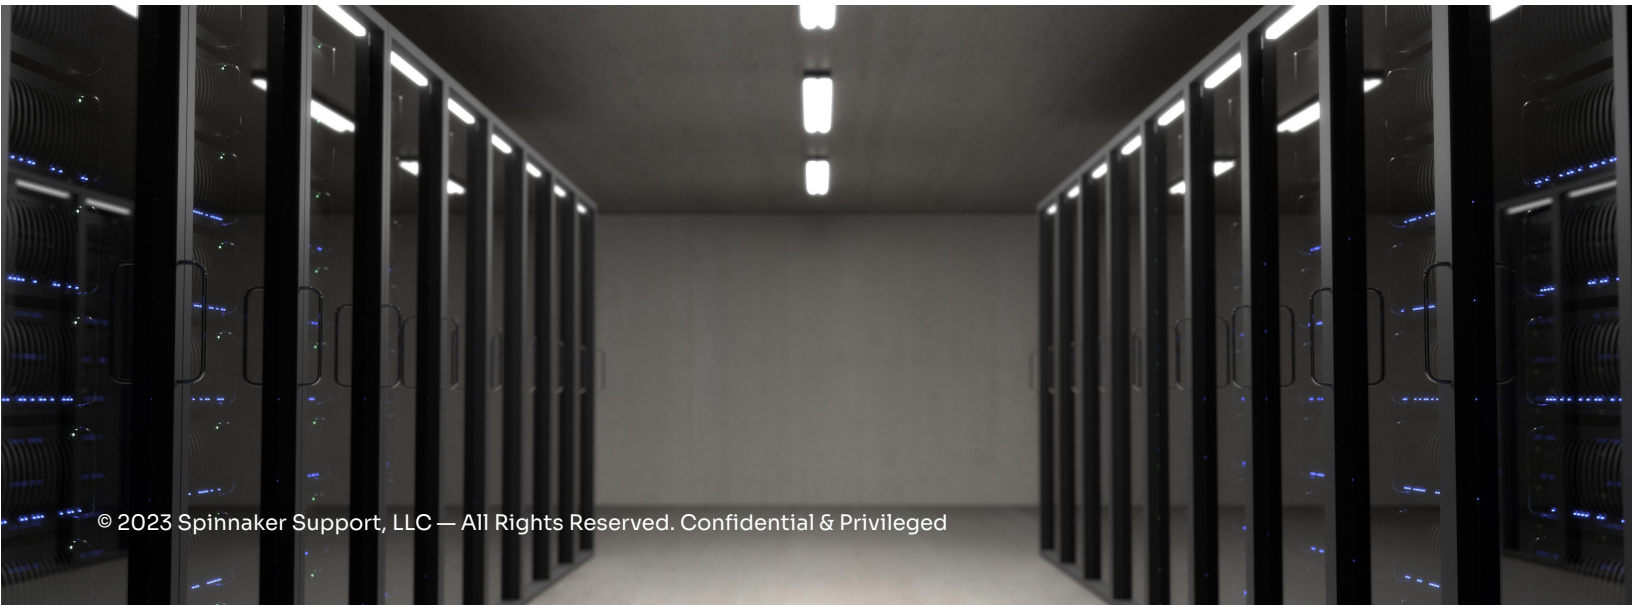

VIEW YOUR DATABASE ENVIRONMENTS UNDER A SINGLE-PANE OF GLASS

The SpectrumDB 360 Dashboard gathers mission-critical data from multiple systems, organizes them into one collective data warehouse, and provides a comprehensive overview of your database environment(s) and support tasks.

Included in the Gold and Platinum SpectrumDB managed services packages at no extra cost, this data warehouse and interactive console gives clients 24/7 access to view the health and metrics of their database systems and ongoing DBA tasks. The drill-down views give you and your executives the service and production insights you need in a single place and at a moment's notice.

WHY SPECTRUMDB 360?

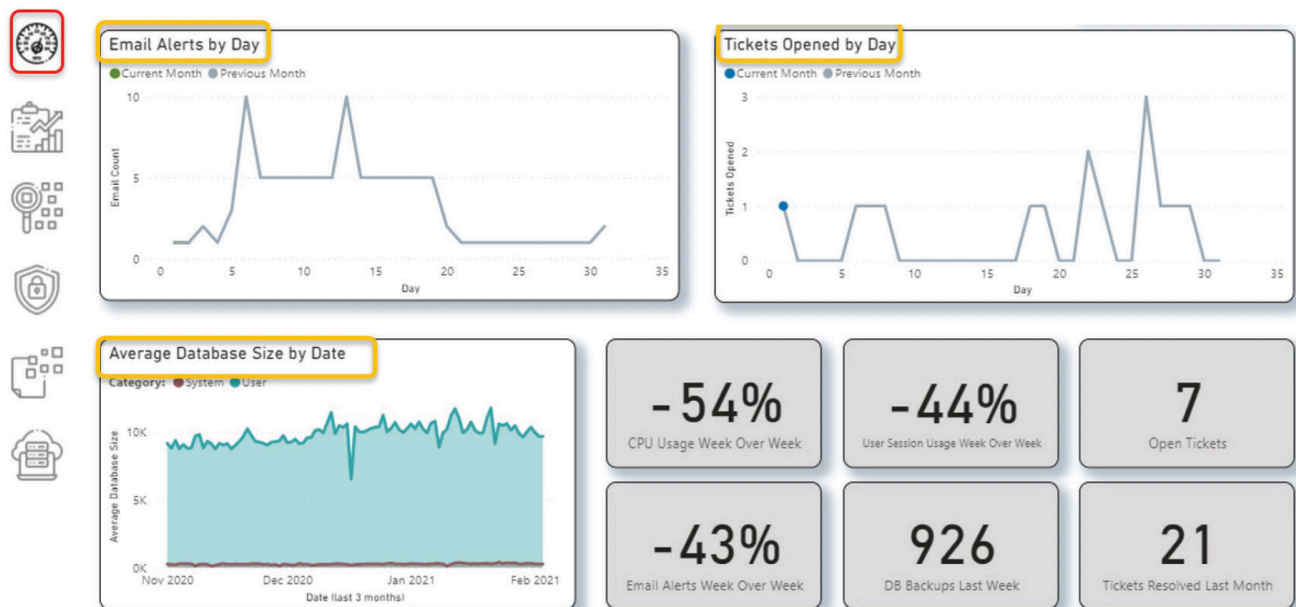

Managing and monitoring your database and server environments is a time-consuming effort, which is why you're considering SpectrumDB managed services. Yet most managed services providers stumble when it comes to on-demand reporting and system insights because they lack the infrastructure and expertise to provide immediate access to performance trends, current inventory, and even task history.

With SpectrumDB 360, you have immediate access to a tool that visualizes correlated metrics across your database environments. Your information is securely stored and collected within SpectrumDB 360, processed through our email and ticketing systems, and protected behind our firewalls for maximum security.

- Firewalls are set up on all ends of the database exchange to ensure your database security.
- End-Users have direct access to tickets, email alerts, and database server metrics.
- Our DBAs communicate with you regarding all information from our SpectrumDB 360 Server.

SPECTRUMDB™ Dashboard

REMOTE MANAGEMENT IS NOW EVEN EASIER — WITH SPECTRUMDB 360 DASHBOARD

FEATURES

- A blended system of human-verified input with system-collected information
- Web-based and secure, accessed via any Internet-enabled device
- Includes organized views to review:
 - Inventory
 - Back-Ups
 - Tickets
 - System Metrics
 - Email Alerts
 - DBA Support Tasks
- 24/7 Self-service access
- Data is updated daily
- Built on Microsoft Power BI Services

ADVANTAGES

- Full transparency to your database environment and the operations covered by SpectrumDB.
- Convenience of having your database environments organized into one collective data warehouse.
- Hands-on access to disparate data that is usually hard to assemble.
- Reliable, trusted data presented in an informative and intuitive interface.

BENEFITS

- Insights that allow you to make better informed business decisions around database support, management, planning and strategy.
- On-demand dashboard means you do not have to wait for reports or information on the health of your critical servers and database environments.
- You can strengthen executive awareness and support with data snapshots and operational details regarding your investment in SpectrumDB.

ABOUT US

Founded in 2008, Spinnaker Support is the only vendor to deliver a unique blend of third-party support, managed services, and project-based consulting for enterprise databases. Global customers trust us to keep their enterprise applications running at peak performance while helping them navigate from on-premise to hybrid to cloud. Spinnaker Support provides ad hoc and ongoing services for most enterprise databases, including Oracle, SAP, Sybase, Microsoft, MySQL, and open source. In 2021, Spinnaker Support added additional depth through our acquisition of Dobler Consulting, the premier provider of database managed services and consulting.
